

The Beer Game [Sprint #1]

Documentation

The focus of our team was on the front-end of the web application. The homepage is aesthetic and simplistic, including only an image of a beer and the title of the game. This was coded with a simple HTML form and it was styled with CSS. The home page, like every other page, includes a bar in which the user can find a link to the home page, login page and register page.

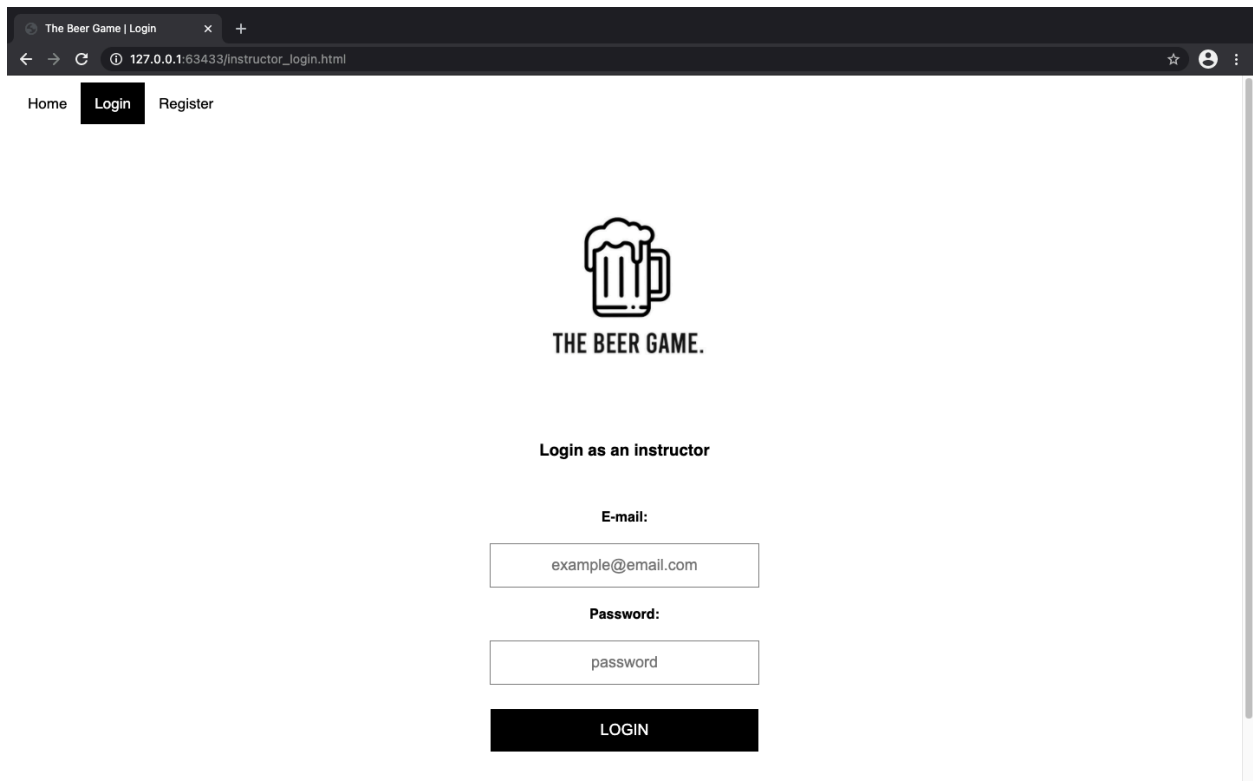

When user clicks on the login link it will display the following page:

This page provides two different links for the user, if the user is an instructor it will direct him/her to the instructor login page. If the user is a student, it will direct him to the player login page.

The following image displays the instructor login page:

In this page, the instructor is asked to input a valid email and password and proceed further (to be continued in other sprints).

The Beer Game | Login

127.0.0.1:63433/instructor_login.html

Home Login Register

THE BEER GAME.

Login as an instructor

E-mail:
example@email.com

Password:
password

LOGIN

For the students, the login page looks like the following image:

The Beer Game | Login

127.0.0.1:63433/player_login.html

Home Login Register

THE BEER GAME.

Login as a player

E-mail:

example@email.com

Password:

password

Game ID:

password

In this page, the student is asked to input a valid email and password as the instructor, with the addition of the game ID of the game the student wishes to join.

Last but not least, is the Register page, for those users who do not have the login credentials and are joining the game for the first time. The application will display the following page to that user:

The Beer Game | Register

127.0.0.1:63433/register.html

Home Login Register
